TwinLight™ Periodontitis

Before

After

Peri-Implantitis Treatment

Before

After

Benefits of combination Erbium & Nd:YAG wavelengths therapy for both Periodontal Disease and Peri-Implantitis

Erbium Laser

- More thorough calculus removal WITHOUT heating or damaging the implant or the tooth root surface
- Re-contouring of the bone

Nd:YAG Laser

- Selective tissue removal
- Selective deep penetrating bacterial killer
- Fibrin Clot through hemeostasis
