DR. JIM GRIDDALE

*B.A., D.D.S., Dip. Prosth.,
Dip. Perio., M.R.C.D.(C)*

Dr. Grisdale is Board Certified in Periodontics and Prosthodontics with a part-time private practice in Vancouver, British Columbia. Dr. Grisdale received his undergraduate and graduate degrees from McGill University, as well as a post graduate degree in Restorative Dentistry and Prosthodontics. He then went on to the University of British Columbia where he received another postgraduate degree in Periodontics. Dr. Grisdale was formerly a full time faculty member in the graduate periodontal residency program at Loma Linda School of Dentistry, Loma Linda, CA and is currently an invited lecturer. Dr. Grisdale lectures extensively in the United States, Canada, and has lectured in South-east Asia and Europe. He is a mentor for Periodontic and Implant Study Clubs. Dr. Grisdale has published in the area of treatment for dentin sensitivity, implants, bone regeneration and soft tissue periodontal adhesives. He is an active participant in clinical research and the study of contemporary periodontal products. He is a member of several professional societies.

LECTURE

The Art and Science of Crown Lengthening for Successful Restorative Dentistry: From Concepts to Predictable Results

Course Description:

This course will focus on the different techniques utilized in esthetic and functional crown lengthening. The concept of biologic width and ferrule effect as it applies to crown extension will be addressed. Diagnosis and treatment planning will be discussed in detail. Soft and hard tissue surgical approaches will be emphasized. Proper case selection, flap types and management from incisions, flap elevation, osseous surgery, and suturing techniques for predictable wound healing will be covered. Newer technology for crown lengthening will also be introduced.

Learning Objectives:

At the end of the program, participants will learn:

- to diagnose and treatment plan for predictable esthetic and functional crown lengthening
- to recognize the indications and contraindications for crown lengthening
- the principles of biologic width and ferrule effect and how they apply to esthetic and functional crown lengthening
- different crown lengthening procedures, instrumentation and predictable techniques for crown extension
- post-operative care instructions and wound healing

Goldman Dental Management Approved PACE Program Provider for FAGD/MAGD credit. Approval does not imply acceptance by any regulatory authority or AGD endorsement. 10/1/2023 to 9/30/2025. Provider ID# 412781

WORKSHOP

Crown Lengthening for Predictable Esthetic and Functional Restorative Treatment Outcomes: A Workshop

Course Description:

This hands-on workshop will focus on the different techniques utilized in surgical crown extension for esthetic and functional cases. Indications and contraindications for crown lengthening will be addressed. Proper case selection, flap types and management from incisions, flap elevation, osseous surgery and suturing techniques will also be presented in detail. This course is a must for all dentists who are providing esthetic and functional crown restorations to their patients.

Learning Objectives:

At the end of the program, participants will have learned:

- how to diagnose and treatment plan patients for both esthetic and functional crown lengthening
- to recognize the indications and contraindications for crown lengthening
- the principles of biologic width and ferrule effect and how they apply to functional and esthetic crown lengthening
- flap designs, principles of osseous surgery, suturing techniques and post operative care for crown lengthening procedures

4 HOUR WORKSHOP
Dr. Thomas G. Wiedemann, MD, PhD, DDS

Understanding Sutures and Flap Designs for General Dentists

4 Hr. Hands-On Workshop Plus: 2 Hr. Webinar

(Webinar Pre-Requisite prior to hands on course)
 Hands-On Course Capacity : 20 Students

COURSE DESCRIPTION:

This course is under the direction of
Thomas G. Wiedemann, MD, PhD, DDS

Oral Surgery procedures are an integral part of everyday dental practice. General Dentists perform extractions, periodontal surgery and implant placements that often require specific suturing skills. However, some clinicians may experience challenges such as suture loosening, flap dehiscence, tearing, and the inability to stabilize flaps. Improper suturing can lead to complications and even treatment failures. Whether dentists have been practicing for years or a relatively short period of time mastering suturing and soft tissue management is an essential skill that will predictably improve the final post-surgical results. The goal of this hands-on course is to train general dentists in predictable and correct suturing techniques and flap designs. Attendees will learn about different types of suture material and needle configuration and indications for their use. The hands-on portion of the course will include lots of firsthand "over the shoulder" tips, tricks, and instructions. Participants will be confident with different suture types and experience the exercise of the most commonly used suturing techniques and flaps in dental practice. Doctors at any level who are interested in improving their suturing skills will be provided with practical information on how to suture properly and improve surgical treatment outcomes.

LEARNING OBJECTIVES:

- Comprehend predictable wound healing, suture mechanics and the importance of correct suturing.
- Select the proper threads, needles, and hand instruments.
- Know the armamentarium needed to facilitate surgical sutures in the mouth.
- Understand why and how to choose a particular type of suture material.
- Learn to perform and apply the most useful suturing techniques in diverse clinical situations and understand the theory of these different suturing techniques in surgical exodontia, bone grafting, implants, clot and membrane stabilization, primary closure
- Discover how to avoid the most common suturing mistakes.
- Perform full-thickness and split-thickness flaps on a pig-jaw including a GBR-procedure and the use of different types of classic and modern suture techniques as related to pre-implantological extractions

BIOGRAPHY:

Thomas G. Wiedemann, MD, PhD, DDS, Clinical Associate Professor and full-time faculty at New York University, College of Dentistry, Department of Oral & Maxillofacial Surgery. Prof. Wiedemann's career consists of more than 25 years of surgical and educational experience in an academic setting and successfully operating a private practice providing the full spectrum of Oral & Maxillofacial Surgery and Implant Dentistry. He has special interests in dental emergency care, pain management, minimal invasive surgical strategies and techniques of the full scope of Oral & Maxillofacial Surgery. He has acquired extensive expertise in implant surgery with multiple implant systems since 1995. He is well versed in innovative concepts of alveolar ridge augmentation and reconstruction and soft tissue regeneration, CBCT guided- and piezo-surgery. He is the author of many publications, speaker in national and international conferences on oral surgery and implantology related topics and serves on the editorial board of several renowned and peer reviewed scientific journals.

PLUS: 2 HOUR SUTURE & FLAP DESIGN WEBINAR

Pre-requisite to hands-on course & should be reviewed by all participants in preparation and prior to the course.

2 Hour Webinar includes:

- The different types of suture needle designs & materials
- Biological principals of different flap designs
