

Other Great Hands-on Courses from Goldman Dental

The 2 courses below are presented by: DR. GEORGIOS E. ROMANOS

Soft Tissue Management in Surgical Dentistry

Embark on a journey into the intricate world of surgical dentistry, where soft and hard tissue techniques converge to restore oral health and combat diseases. Our course is tailored to clinicians eager to enhance their expertise and delve deep into soft tissue management. Through hands-on training and expert guidance, participants will master a comprehensive array of surgical procedures, with a special emphasis on soft tissue techniques for implant dentistry.

CO₂ Laser in Clinical Practice: Oral Indications and Applications

Laser dentistry is a relative new discipline utilizing laser technology providing great advantages for intraoral applications. This course demonstrates the basic differentiation between the various laser wavelengths and focused specifically on the applications of the CO₂ laser (10,600nm). The soft tissue surgical procedures in the periodontal, pre-prosthetic and peri-implant areas as well as removal of soft tissue tumors and pre-malignancies will be presented in step-by-step slide demonstrations. The final step will be a hands-on component using ex-vivo models applying by the presenter and the participants. The main goal is to teach and train participants (general dentists and specialists), when and how to use a CO₂ laser and how to manage potential complications or avoid errors in clinical use.

The 4 courses below are presented by: DR. THOMAS G. WIEDEMANN

Modern Advanced Atraumatic and Surgical Extraction Techniques, Complications Management, Socket Grafting, GBR and Other In-Office Oral Surgery Procedures

This action-packed extraction course, with two hands-on sessions and lectures, will provide a step-by-step blueprint for successful atraumatic extraction techniques with hand instruments and piezoelectric devices as well as appropriate flap designs for surgical extraction procedures. The associated webinar will provide pre-op patient evaluation and safe patient selection and you will leave prepared to return to your practice and immediately provide these new techniques and procedures. You will learn how to select and demonstrate proficient use of the appropriate armamentarium (Periotomes, Proximators, Apical Retention Forceps, Piezotomes vs. conventional instruments) in order to remove and section teeth as well as determine and demonstrate case-appropriate basic and advanced suturing techniques. The course has been carefully designed to integrate didactic, and visual aides, and extensive hands-on attendee participation with a wide range of different exodontia and bone graft procedures (GBR, socket grafts) for each individual patient.

The Importance of Suturing: A Master Class and Hands-on Workshop

Whether clinicians have been practicing for years or a relatively short period of time, mastering suturing and soft tissue management are essential skills that will predictably improve final post-surgical results. The goal of this hands-on course is to train clinicians in predictable and correct suturing techniques and flap designs. Attendees will learn about different types of suture material and needle configuration and indications for their use. The hands-on portion of the course will include ample firsthand "over the shoulder" tips, tricks, and advanced instruction. Participants will be confident with different suture types and experience the exercise of both popular and advanced suturing techniques and flap consideration in dental practice. Doctors interested in improving new and complex suturing skills will be provided with practical information on how to suture properly and improve surgical treatment outcomes.

Understanding Basic and Advanced Guided Bone Regeneration (GBR) and Ridge Augmentation for General Dentists

Guided Bone Regeneration and Ridge Augmentation have become routine procedures to enhance the functional, biological and aesthetic outcome of dental implants. This course will provide extensive hands-on exercises on anatomical models to prepare the general practitioner with the surgical skills necessary to perform GBR. The hands-on portion of the course will include lots of firsthand "over the shoulder" tips, tricks, and instructions. Special attention will be given to the selection of graft materials and membranes based on scientific evidence and decades of clinical experience. Participants will also perform exercises on the use of bone tacks and tenting screws.

The Master Sinus Lift Course for General Dentists

This clinical course will cover assessment, treatment planning, and surgical approaches to sinus floor augmentation for implant placement (crestal and lateral window). It will be delivered through lectures and hands-on training sessions on models. The course is ideal for General dentists looking to expand their implant practice and gain confidence in executing this procedure safely and effectively. This Sinus Lift Course is an educational program designed to enhance the surgical capabilities and expand the knowledge of general dentists and specialists in the area of maxillary sinus lift procedures. General practitioners, especially, can greatly benefit from this training to refine their skills and knowledge in this specific area of dental surgery.

The VISTA course below is presented by: DR. HOMA H. ZADEH

VISTA Oral Plastic Surgery for Soft Tissue Augmentation around Teeth & Implants - Official Certification

Periodontal and peri-implant plastic surgeries have gained increasing prominence for addressing both esthetic and functional soft tissue deficiencies. These oral plastic procedures not only enhance esthetics but also play a pivotal role in enhancing the long-term stability of periodontal and peri-implant tissues. Paradoxically, several procedures labeled as periodontal or peri-implant plastic surgeries often diverge from fundamental plastic surgical principles. In contrast, the VISTA (vestibular incision subperiosteal tunnel access) protocol closely adheres to the scientific principles of wound healing and plastic surgery. In this course, we will delve into the current state of knowledge surrounding periodontal and peri-implant soft tissue augmentation studies. We will outline the rationale behind these procedures and emphasize an evidence-based approach to prevent and manage periodontal and peri-implant soft tissue deformities effectively.

2-Day Therapeutic & Aesthetic Botox Training for TMD, Headaches, Migraines & Facial Aesthetics

16 HOURS HANDS-ON CE

Presented by:

Dr. Jarrod Cornehl

Dr. Jarrod Cornehl, a 2002 honors graduate of the University of Texas Health Science Center at San Antonio, is an accomplished restorative and cosmetic dentist and leading aesthetic medicine expert. He is recognized for his successful combination treatments using dermal fillers, toxins, PDO threads, and the application of PRF with laser therapy, as well as his unique approach to TMD pain management. Dr. Cornehl specializes in non-surgical treatments for TMJ disorders and myofascial pain, utilizing PRF, photobiomodulation, trigger point injections, and neuromodulators. As the founder and lead educator at Regenerative Training Academy, he trains dental and medical professionals in cutting edge PRF techniques for TMD pain relief and facial rejuvenation.

This comprehensive hands-on course combines both therapeutic and aesthetic applications of botulinum toxin. Attendees will gain the skills to evaluate and treat patients for orofacial pain, TMD, headaches, and migraines while also mastering cosmetic injection techniques for the upper third of the face. These regions are not just aesthetic—they are often the root of head and neck pain patterns in patients with TMD.

- Optimize aesthetic and therapeutic dentistry cases for improved patient outcomes
- Effectively treat and alleviate dental ailments with minimal chair time, enhancing patients' daily lives
- Meet growing patient demand by offering treatments already available at other practices
- Provide convenient, routine treatments during scheduled dental appointments
- Boost patient referrals and encourage repeat business through enhanced service offerings
- Increase profitability by tapping into the multi-billion-dollar injectables industry
- Take your dental practice to the next level—for yourself, your patients, and your business

2-Day Therapeutic & Aesthetic Botox Training for TMD, Headaches, Migraines & Facial Aesthetics

Presented by:

Dr. Jarrod Cornehl

**16
HOURS
HANDS-ON
CE**

COURSE DESCRIPTION:

This comprehensive, hands-on training course equips medical and dental professionals with the clinical skills and confidence to treat both the functional and aesthetic concerns of patients using FDA-approved botulinum toxins (Botox®, Dysport®, Xeomin®, Jeuveau®, Daxxify®). The course integrates the therapeutic treatment of TMD, orofacial pain, bruxism, headaches, and migraines with aesthetic procedures targeting the upper third of the face, including the glabella, forehead, and crow's feet.

While Botox is widely known for its cosmetic benefits, its application in facial regions is also a powerful medical treatment—blocking pain signals in the muscles and nerves responsible for chronic head and neck tension. Treating these areas simultaneously enhances facial esthetics and reduces the frequency and severity of migraines and muscle-based facial pain.

Attendees will learn to properly assess, diagnose, plan, and execute botulinum toxin treatments for comprehensive patient outcomes. Live patient injections under one-on-one instructor guidance provide the foundation for immediate clinical implementation.

LEARNING OBJECTIVES:

Therapeutic Applications:

- Diagnose TMD, orofacial pain, and headaches efficiently, distinguishing between muscular and joint-related conditions.
- Understand the mechanism of action of botulinum toxin for pain relief and functional therapy.
- Master safe and effective dosing and injection techniques for muscles involved in bruxism, TMJ disorders, and cervicogenic headaches (e.g., Masseter, Temporalis, Sternocleidomastoid, Trapezius, Splenius Capitus).
- Identify and inject trigger points to provide immediate and long-term relief for myofascial pain.
- Develop and execute personalized treatment plans for TMD, chronic headaches, migraines, and facial pain.
- Combine botulinum toxin and trigger point injections for enhanced therapeutic results.

Aesthetic Applications:

- Perform aesthetic injections for common cosmetic concerns: frown lines, forehead lines, crow's feet, bunny lines, and brow lifts.
- Conduct professional consultations, set realistic expectations, and design custom facial mapping strategies.
- Develop a working knowledge of facial musculature and neurophysiology critical to both aesthetic and therapeutic outcomes.
- Learn how facial esthetic regions (especially in the upper third of the face) relate to head and neck pain and migraine patterns.
- Explore how Botox synergizes with dermal fillers, PRF, microneedling, and laser therapies in comprehensive treatment plans.

Across Both Domains:

- Master product handling, reconstitution, and storage for all major FDA-approved botulinum toxins.
- Learn critical safety protocols, contraindications, and complication management.
- Access clinical documentation tools, consent forms, and fee structures for practice integration.

KEY BENEFITS:

- While aesthetic Botox improves facial appearance, its application for migraine and headache relief is strictly therapeutic. These injections block pain signals in the nerves and muscles of the head and neck—leading to reduced headache frequency and intensity. Patients experience less pain, fewer migraines, and enhanced facial esthetics.
- Provide dual-benefit care: reduce patient pain and enhance appearance in a single visit.
- Confidently treat functional pain symptoms through esthetic zones (e.g., glabella, forehead, orbicularis oculi), addressing the root of headaches and migraines.
- Add high-value, high-demand procedures to your practice with minimal chair time and maximum patient satisfaction.

ADDITIONAL DETAILS:

- Live Patient Practice: **Participants are strongly encouraged to bring their own patient to receive guided, personalized instruction.**
- Product Access: Botox is available at \$6/unit for in-course use.
- CE Hours: 16 Hours of Hands-On Continuing Education over 2 Days.
- Eligibility: Open to Dentists, Physicians, PAs, RNs, NPs, and Dental Hygienists.

◆ 2-Day Therapeutic & Aesthetic Botox Training For TMD, Headaches, Migraines & Facial Rejuvenation

Master both the therapeutic and aesthetic applications of botulinum toxin in this hands-on course. Learn to treat TMD, migraines, and facial pain while enhancing appearance—especially in the upper third of the face, where esthetic zones overlap with key pain pathways.

- ✓ Treat pain and improve looks in one visit
- ✓ Practice on live patients
- ✓ 16 CE Hours - Hands-On
- ✓ Botox available at \$6/unit

Open to Dentists, MDs, PAs, NPs, RNs, and RDHs

DAY 1 - LECTURE

Fridays • 8:00 am - 5:00 pm
Therapeutic & Aesthetic Botox
lecture - All day lecture

Course Code 200

DAY 2 - HANDS-ON

Saturdays • 8:00 am - 5:00 pm
All day Hands-On
combination treatments

Course Code 780
