4 Hr. Hands-On Workshop
Plus: 2 Hr. Online Webinar

(Pre-Requisite prior to hands-on course)
Hands-On Course Capacity : 20 Students

6
CEU

COURSE DESCRIPTION:

This course is under the direction of Thomas G. Wiedemann, MD, PhD, DDS. Oral Surgery procedures are an integral part of everyday dental practice. General Dentists perform extractions, periodontal surgery, and implant placements that often require specific suturing skills. However, some clinicians may experience challenges such as suture loosening, flap dehiscence, tearing, and the inability to stabilize flaps. Improper suturing can lead to complications and even treatment failures. Whether dentists have been practicing for years or a relatively short period of time, mastering suturing and soft tissue management is an essential skill that will predictably improve the final post-surgical results. The goal of this hands-on course is to train general dentists in predictable and correct suturing techniques and flap designs. Attendees will learn about different types of suture material and needle configuration and indications for their use. The hands-on portion of the course will include lots of firsthand "over the shoulder" tips, tricks, and instructions. Participants will be confident with different suture types and experience the exercise of the most commonly used suturing techniques and flaps in dental practice. Doctors at any level who are interested in improving their suturing skills will be provided with practical information on how to suture properly and improve surgical treatment outcomes.

LEARNING OBJECTIVES:

- Comprehend predictable wound healing, suture mechanics, and the importance of correct suturing
- Select the proper threads, needles, and hand instruments
- Know the armamentarium needed to facilitate surgical sutures in the mouth
- Understand why and how to choose a particular type of suture material
- Learn to perform and apply the most useful suturing techniques in diverse clinical situations and understand the theory of these different suturing techniques in surgical exodontia, bone grafting, implants, clot and membrane stabilization, primary closure
- Discover how to avoid the most common suturing mistakes
- Perform full-thickness and split-thickness flaps on a pig-jaw including a GBR-procedure and the use of different types of classic and modern suture techniques as related to pre-implantological extractions

NOW OFFERING LIVE PATIENT CLASSES!
Go to www.goldmandental.org for more info.

2 HOUR SUTURE & FLAP DESIGN WEBINAR

Pre-requisite to hands-on course & should be reviewed by all participants in preparation and prior to the course.

2 Hour Webinar includes:

- The different types of suture needle designs & materials
- Biological principals of different flap designs

SUTURES & FLAP DESIGN COURSE SCHEDULE

Registration and Lecture on suture techniques.....First Hour

Suture practice on suture padSecond Hour
classic/basic and advanced suture techniques

Live Demonstration and Hands-On Training on pig jawThird and Fourth Hour
Flap designs, GBR and suture techniques, tips and tricks.

One Day Hands-On Workshop Plus 2 Hr. Webinar

(Webinar Pre-Requisite prior to hands-on course)
Hands-On Course Capacity : 20 Students

10
CEU

COURSE DESCRIPTION:

This action-packed extraction course, with two hands-on sessions and lectures, will provide a step-by-step blueprint for successful atraumatic extraction techniques with hand instruments and piezoelectric devices as well as appropriate flap designs for surgical extraction procedures. The associated webinar will provide pre-op patient evaluation and safe patient selection and you will leave prepared to return to your practice and immediately provide these new techniques and procedures. You will learn how to select and demonstrate proficient use of the appropriate armamentarium (Periotomes, Proximators, Apical Retention Forceps, Piezotomes vs. conventional instruments) in order to remove and section teeth as well as determine and demonstrate case-appropriate basic and advanced suturing techniques. The course has been carefully designed to integrate didactic, and visual aides, and extensive hands-on attendee participation with a wide range of different exodontia and bone graft procedures (GBR, socket grafts) for each individual patient.

LEARNING OBJECTIVES:

By the end of the course, doctors will be able to:

- Understand and apply practical working knowledge in non-surgical and surgical techniques used in modern exodontia
- Apply and select specific instruments for minimally invasive and alveolar ridge protecting extraction procedures to facilitate immediate dental implant placement
- Manage common real-life complications associated with tooth extractions
- Analyze and anticipate surgical challenges in tooth extractions
- Feel comfortable in risk assessment in medically compromised patients requiring tooth extractions
- Perform current simple protocols of GBR, including socket preservation, as related to pre-implantological extractions
- Perform other frequent and common oral surgery procedures in the general dental practice
- Allow participants to refine and update all surgical skills

Dr. Thomas Wiedemann
MD, PhD, DDS

BIOGRAPHY:

Thomas G. Wiedemann, MD, PhD, DDS, Clinical Associate Professor and full-time faculty at New York University, College of Dentistry, Department of Oral & Maxillofacial Surgery. Prof. Wiedemann's career consists of more than 25 years of surgical and educational experience in an academic setting and successfully operating a private practice providing the full spectrum of Oral & Maxillofacial Surgery and Implant Dentistry. He has special interests in dental emergency care, pain management, minimal invasive surgical strategies and techniques of the full scope of Oral & Maxillofacial Surgery. He has acquired extensive expertise in implant surgery with multiple implant systems since 1995. He is well versed in innovative concepts of alveolar ridge augmentation and reconstruction and soft tissue regeneration, CBCT guided- and piezo-surgery. He is the author of many publications, speaker in national and international conferences on oral surgery and implantology related topics and serves on the editorial board of several renowned and peer reviewed scientific journals.
